

### Strider® Events

STRIDER® Bikes are taking the world by storm, and everyone wants in on the action! Whether it's a Strider Adventure Zone at a small local event, a Strider Cup® race in a city near you, or the big Strider Cup World Championship event, one—or ALL—of these could be right for you. Strider events will entertain your toddler and give them the opportunity to be part of a growing community of cycling enthusiasts! They will be making new friends and clicking their sippy-cups together as a cheers to a great day of friendly competition!

### Strider® Education

Strider Learn to Ride classes teach kids of all ages and all abilities how to ride on two wheels. The Curriculum is built around five 1-hour sessions of learning, fun, socialization, and instruction sure to ignite a passion for riding. Upon completion of the course, children will have the balance and bike handling skills to ride on two wheels and never need training wheels!

### Strider® Rider Fund

At Strider, we love riding bikes, and we love inspiring kids to ride. However, we know that many kids face much greater challenges than learning to ride a bike. To do our part, we created the Rider Fund to support local, national, and international charities addressing these challenges. Every month, we commit one percent of gross revenue from all sales worldwide to this fund... that's a right-off-the-top-line commitment, not a let's-see-what's-left-on-the-bottom-line consideration. Furthermore, if a charitable organization prefers STRIDER Bikes and products instead of cash, we triple the donation! The bikes and products are donated through a grant application process. Through the end of 2015, we have donated over \$250,000 in cash and over \$350,000 in Strider products. At Strider, we give generously, and we love doing it!

### 16 Sport

STRIDER® Balance Bikes are the industry leader when it comes to helping children as young as 18 months learn to ride on two wheels. The lightweight, pedal-less, all-terrain design allows children to straddle the bike with both feet on the ground and easily propel the bike by walking or running. This natural method puts the focus on the fundamentals of balancing, leaning, and steering without the distractions and complications of pedals or training wheels.
